# Results break out session

## WG: Poultry

## Vision

- Research project to investigate the boundaries and framework that need to be fulfilled to get sufficient commitment of the sector

## Scale

- Start small, concentrate on main players

## Countries/participants

---

- ✦ Start small, with major actors
  - National level or regional or international level to be decided

## Hurdles

- Standardisation of definition of traits
- Gathering traits according to harmonised protocols
- Anonymisation required because of misuse of transparency
- There is already a situation in place with data gathering, which hampers further development. In this step the most important benefits are already being captured (early warning, internal bench marking)

## Opportunities

- Just an animal disease registration database or a database with technical data
- Make inventarisation of the sensitivities

## Timeline

- First an investigational phase and depending on the outcome a proposal for way forward

## Conclusions

- Worthwhile to initiate investigational phase
- Way forward dependent on outcome
