

# Overview Working Group Poultry

*Peter Oostenbach*

# Questionnaire content

---

## Questionnaire content

- ✦ Wished for deliveries
  - Improved insights in Animal Health situations
  - Benchmarking tool
  - Alerting system
    - Improved preparedness
      - Preventive
      - biosecurity
      - curative
  - Categorization of relevant poultry diseases

## Questionnaire content

---

- ✦ Benefits / add on values
  - Processing industry
    - Food safety
    - economics
  - Motivation for other actors in production / processing chain to participate

## Questionnaire content

- ✦ Existing national programs
  - France
  - NL
  - On top what is required by EC legislation
- ✦ Data collection issues
  - Collector of data should also be responsible for input
  - Farmers already have a high administrative workload
  - If others collect farm data and submit these data to the system they should be authorized by the farmer

## Questionnaire content

- ✦ Hurdles
  - Confidentiality
  - Transparency versus liability
  - Trying to reach a collective goal by individual input
  - Accuracy of data
  - Visibility of benefits
  - IT technology
    - Differences in definition of parameters
    - Incompatibility of systems

## A personal reflection

- ✦ Some major players have platforms to share / exchange information on animal health
  - European Veterinary Poultry Study Group
  - Poultry breeders have their own technical and sometimes also veterinary staff across Europe
  - Integrators / feed companies can and do consolidate data for their customer base
- ✦ To some extent comparison and benchmarking within this platform / data collection is feasible
- ✦ Is there a disadvantage in having already a however 'limited' system in place ?
